

TokTickIT

CPE334 Lab 3 - Submission Evidence

Exactly one PDF with nine rubric sections in the required order. Evidence is rendered in the document; links are supplementary.

Field	Value
Repository	MacOverlorD/toktickit
Workflow	feature branches -> lab3-staging -> main
Release PR	PR #52 - formally approved and merged
Repository evidence ref	2270c5093a38bdcc53278dddadf09712fe9e8f74
Verification	Final main f8d5307: server 144, client 134, build passed, Playwright 10/10

Release truth

PR #52 received formal approval and merged to main as f8d5307. This final artifact records the actual final-main rerun and pins repository evidence to the immutable 40-character merge SHA.

Answer Part 1 - Git Use with Engineering Workflow

Rendered workflow record

Issue	Branch / scope	PR	Recorded result
#33	3-01 contract	#42	Approved; merged
#34	3-02 migration	#44	Changes fixed; merged
#35	3-03 authentication	#45	Changes fixed; merged
#36	3-04 requester	#46	Changes fixed; merged
#37	3-05 queue	#47	Changes fixed; merged
#38	3-06 detail	#48	Changes fixed; merged
#39	3-07 admin	#49	Changes fixed; merged
#40	3-08 verification	#50	Changes fixed; reviewer merged
#41	3-09 release	#51	Fixes merged; Done

Rendered reviewer record

Reviewer	Finding / response	Decision evidence
Titihinan Sobking (Ohmmykung09)	PR #42 contract review; source-section correction applied.	Approved commit 270bf9a; merged 6418e3f
Ohmmykung09	PRs #44-#50 requested migration, auth, regression, queue, detail, admin, keyboard and visual fixes; each response and commit is recorded.	Merged after fixes; no formal approval invented where absent
Ohmmykung09	PR #51 requested readable crops, complete rendered rubric evidence, stable final-main links, and corrected header contrast; commit 280d350 addressed all four findings.	Merged as 3ee94a9; no later formal approval recorded on #51
Ohmmykung09	PR #52 reviewed the complete lab3-staging release diff and recorded the comment: gute arbeit.	Formally APPROVED; merged to main as f8d5307

Working record: [reviewer.md](#) | [PR #51 review](#)

Part 1 continued - Repository and Project Evidence

Final Kanban

Issues #33-#41 are closed and their GitHub Project items are Done. PR #51 integrated the corrected release evidence into lab3-staging; formally approved PR #52 completed the required merge to main.

README and .gitignore evidence

Artifact	Rendered evidence
README	Setup includes environment files, PostgreSQL, dependency installation, Prisma generate/deploy/seed, development ports, authentication/session behavior, Lab 3 test commands, isolated E2E ports, scoped cleanup, and promoted visual evidence.
.gitignore	Ignores node_modules, uploads, secrets, build/coverage, Playwright reports/results and tmp; explicitly keeps Lab 3 Markdown and exactly one submission PDF.

Repository structure

Path	Purpose
docs/lab-03/	specification.md, tests.md, ui-spec.md, api-spec.md, reviewer.md, ai-use.md
server/tests/lab-03/	authentication, migration, password, queue, detail, account and domain tests
client/tests/lab-03/	authentication, queue, detail, requester communication and user management UI tests
e2e/lab-03/	authentication, requester flow, queue, ticket workflow, administration and visual evidence
artifacts/lab-03/screenshots/	37 tracked authentication, requester, queue, detail and administration captures
output/pdf/	TokTickIT_Lab3_Submission.pdf only

Direct authorization proof

server/tests/lab-03/staff-ticket-detail.api.test.ts exercises role denial, current-actor checks, private-note isolation, attachment access, optimistic conflicts and every permitted/forbidden transition. All cases passed in the 144-test server run.

Links: [README](#) | [.gitignore](#) | [Project board](#)

Answer Part 2 - Specification-Driven Development

The specification was approved in PR #42 before implementation PRs #44-#50. The rendered summary below mirrors the numbered source contract.

Requirement group	Rendered numbered contract
FR-01..FR-03	Login/session restoration, mandatory password change, role-aware shell and direct-route protection
FR-04..FR-06	Authenticated Requester regression, data-preserving migration, Staff queue
FR-07..FR-09	Staff detail/workflow, communication, Administrator user management
FR-10	Integrated accessibility, responsive evidence, traceability and release submission
BR-01..BR-26	Server-owned identity; one role; active/current actor; safe errors; exact transitions; optimistic versions; append-only communication; last-admin and self-deactivation safeguards
AC-01..AC-17	Authentication through release evidence, each mapped to executable tests in the following traceability section

Authorization rules

Capability	Requester	IT Staff	Administrator
Own tickets / public comments	Yes	Operational read/comment	No
Staff queue/detail and internal notes	No	Yes	No
Account management	No	No	Yes
Direct API/route denial	403/redirect outside role	403/redirect outside role	403/redirect outside role

Migration decisions and Product Definition of Done

- Forward-only, data-preserving migration with complete legacy-email preflight, transaction rollback proof, immutable seed fixture identity, repeatable seed, and Argon2id local provisioning.
- Done requires implemented requirements, automated unit/API/UI/authorization/regression/E2E coverage, reviewed responsive evidence, peer-review record, one nine-part PDF, reviewed release to main, and a passing final-main rerun.

Source: [specification.md](#) | Pre-implementation evidence: [PR #42](#)

Answer Part 3 - Test-Driven Development and Traceability

Rendered AC traceability

IDs	Types and actual paths	Status
AC-01..04	API: server/tests/lab-03/auth.api.test.ts, login-rate-limit.test.ts; UI/E2E: authentication-ui.test.tsx, authentication.spec.ts	Passed
AC-05..06	Lab 2 API/UI regression plus e2e/lab-03/requester-ticket-flow.spec.ts	Passed
AC-07	staff-queue.api.test.ts; StaffTicketQueue.test.tsx; staff-queue.spec.ts	Passed
AC-08..10	staff-ticket-detail.api.test.ts; ticket-domain.test.ts; StaffTicketDetail.test.tsx; ticket-workflow.spec.ts	Passed
AC-11..13	users-admin.api.test.ts; account-domain.test.ts; UserManagement.test.tsx; user-administration.spec.ts	Passed
AC-14	migration.test.ts; password-foundation.test.ts	Passed
AC-15..16	UI suites; visual-evidence.spec.ts; 37 screenshots	Passed
AC-17	reviewer.md; PDF; final-main command output	Passed on main f8d5307

Final-main output (2026-09-17, f8d5307)

Command	Observed output
npm run prisma:generate --prefix server	Prisma Client generated successfully
npm run test:server	24 files, 144 tests passed in 149.56 s
npm run test:client	17 files, 134 tests passed in 116.31 s
npm run build	Server/client TypeScript and Vite production build passed
npm run test:e2e	10 Playwright tests passed in 2.7 minutes on isolated ports 3100/5174

Coverage includes unit, API/integration, UI, authorization, Lab 2 regression, migration, concurrency, E2E, keyboard focus and responsive visual checks. PR #52 is formally approved, the release is on main, and REL-01 is Passed.

Source: [tests.md](#)

Answer Part 4 - AI Use with Reflection

LLM used: OpenAI Codex (exact deployed model variant is not exposed to the repository). Selected prompt summaries:

#	Selected prompt summary
1	Read the Lab 3 handout and propose an issue count.
2	Reduce the plan to eight or nine issues without losing coverage.
3	Continue after the Staff Queue merge and open the next feature PR.
4	Address PR #46 findings, update evidence, reply, and request re-review.
5	Complete Issue 1 authoring and make its PR ready.
6	Merge the reviewed Issue 1 PR.
7	Continue with Issue 2 after Issue 1 merged.
8	Address PR #44 findings and resubmit.
9	Continue with the next Lab 3 issue after merge.
10	Run front/back, confirm the remaining issue, and complete release evidence.

My Reflection

AI was most useful for turning the handout into traceable requirements, implementing repetitive API/UI tests, and checking behavior across roles and screen sizes. I did not treat generated work or self-review as proof: I used executable server, client, build and browser checks, inspected visual evidence, and kept formal review decisions separate from positive comments. A key limitation was environment sensitivity: a live development API changed a unit-test result, so unexpected network access was isolated and the full suite rerun before the evidence was trusted.

This is a Codex-assisted draft based on the recorded work; the student must confirm it matches their experience.

Source: [ai-use.md](#)

Answer Part 5 - Working Login and Password Change UI

Required demonstration	Rendered evidence
Valid login	authentication.spec.ts signs in with a seeded active account and verifies the role home
Invalid login / inactive account	Generic safe failure; no account-existence disclosure; API/UI assertions cover both
Busy / safe failure	Disabled submission while pending and generic retryable feedback
Mandatory first password change	Initial-password account is gated until valid replacement succeeds
Authenticated user/role	Role-aware shell displays identity and navigation
Logout / direct access blocked	Session invalidated; protected API and replayed route denied

Login form crop: labels, controls and safe sign-in action

Invalid input feedback at 320px

TOKTICKIT

Answer Part 6 - Working IT Staff Ticket Queue UI

Rubric scenario	Demonstration
Realistic data / open detail	Seeded multi-status tickets with ticket-number detail links
Search / filters / sorting / page size	URL-backed controls trigger normalized API queries immediately
Pagination	Snapshot-consistent paging with recoverable out-of-range state
Ownership / badges	Assigned and unassigned owners plus status and IT-priority badges
Empty / no results / failure	Distinct states with Clear Filters or Retry
Responsive	Eight-column desktop table; tablet/mobile cards; 320px overflow assertion

Answer Part 7 - Working Staff Ticket Detail UI

Required demonstration	Rendered implementation/test evidence
Claim / reassign	Owner changes require current version and eligible active IT Staff
IT Priority / status	Allowlisted priority and exact eight-state transitions; invalid pairs rejected
Public Comments / Internal Notes	Append-only server author/time; private notes never leak to Requester
Attachment continuity	Staff read-only metadata/content uses protected authorization
Requester resolution indication	Resolved state explicitly informs Requester while preserving public timeline
Role restrictions / direct API	Requester/Admin Staff endpoints return forbidden; cross-owner/private data protected
Validation / safe failure	Unicode code-point boundaries, first-invalid focus, stale-version recovery and Retry

Direct authorization proof

server/tests/lab-03/staff-ticket-detail.api.test.ts exercises role denial, current-actor checks, private-note isolation, attachment access, optimistic conflicts and every permitted/forbidden transition. All cases passed in the 144-test server run.

Answer Part 8 - Working Administrator User Management UI

Required scenario	Demonstration
List / Edit	Name, Email, Role, Status and Edit action in table/cards
Search / role filter	Immediate normalized query with ordered-response protection
Create	One permitted role and initial password; credentials cleared after completion
Validation	Canonical/total email, name, role, boolean and version checks; duplicate email feedback
Edit / activation	Name, email, role, active state; stale draft/version preserved for recovery
Reset password	New initial password invalidates sessions and requires change at next login
Safety	Current actor cannot self-deactivate; serializable transaction protects last active Administrator
Authorization / failure	Non-Administrators forbidden; safe errors and Retry

Answer Part 9 - Zen Green UI and Responsive Evidence

Rendered ui-spec.md summary

Design area	Completed specification/check
Zen Green system	Shared teal/green tokens, calm surfaces, strong text contrast, consistent spacing and flat data presentation
Role navigation	Requester, IT Staff and Administrator destinations are visible only when authorized; mobile navigation keyboard-tested
Badges	Status and priority use consistent semantic labels and colors
Editable/read-only	Forms and operational controls are visually distinct from immutable request and audit data
Validation	Field-adjacent messages, safe summaries and first-invalid focus across auth/account/comment/operation forms
Focus	Complete keyboard target traversal with visible focus including upload proxy
Clipping/overlap/overflow	Desktop/tablet/mobile/320px screenshots inspected; automated document-width assertions pass

Major-screen responsive inventory

Screen	Desktop	Tablet	Mobile / boundary
Login / password change	1440x900	820x1180	390x844 / 320x844
Requester list/detail	1440x900 / 1655	827x1391 / 1645	390x1523 / 1927; 320 boundary

Part 9 continued - Authentication Responsive Evidence

The desktop view of the TokTickIT Sign in form is displayed on a light gray background. The form is a white card with a green border. It features the TokTickIT logo at the top left, followed by the heading "Sign in" and the instruction "Use your service desk account to continue." Below this are two input fields: "Email" and "Password". The "Email" field is a simple white box. The "Password" field is a white box with a green eye icon on the right side. At the bottom of the form is a green button with a white right arrow and the text "Sign in".

Figure: Authentication desktop crop

The image shows two versions of the TokTickIT Sign in form side-by-side. On the left is the "Authentication tablet crop", which is a smaller version of the desktop form. It has the same layout: TokTickIT logo, "Sign in" heading, instruction, "Email" and "Password" fields, and a green "Sign in" button. On the right is the "Authentication mobile crop", which is a larger version of the form. It also has the same layout, but the "Email" and "Password" fields are wider, and the green "Sign in" button is more prominent. Both versions include red asterisks next to the "Email" and "Password" labels, indicating required fields.

Completed visual checklist

Consistency, role navigation, badges, editable/read-only distinction, validation placement, complete keyboard focus, clipping, overlap and horizontal overflow were checked through automated Playwright assertions and manual inspection of the 37 promoted screenshots. Long pages are shown here as purpose-specific crops so labels and controls remain readable at normal PDF size.
